

wherein the engagement of the ridge and undercut forms an impermeable seal, whereby a sealed blister is formed from the plastic lid and the recess of the plastic sheet.

13. A package assembly for dispensing a pharmaceutical medication comprising:  
a plastic sheet having a medication receiving recess formed therein and with a substantially planar shoulder portion disposed along the peripheral portion of the sheet and further with a perimeter around the recess;  
a pharmaceutical medication positioned in said recess of said plastic sheet;  
a plastic lid positioned in an overlying relationship to the plastic sheet, the plastic lid comprising a raised ridge having an outside edge corresponding to the perimeter of the recess and frictionally engaging the perimeter to thereby close the recess and impermeably seal the medication therein.

Please add new claims 16 and 17 as follows:

16. A sealed blister assembly set forth in claim 1, wherein the dimensions of the ridge are larger than the corresponding dimensions of the undercut.

17. A package assembly set forth in claim 14, wherein the dimensions of the ridge are larger than the corresponding dimensions of the undercut.
